RESUME · DALLAS–FORT WORTH, TX (REMOTE)

Laxmi Narsimha Reddy Jammula

Senior Engineering Manager · goes by "Narsimha"

14+ years shipping enterprise software, the last 5+ as an engineering manager — now applying the same rigor to the coding agents doing the shipping: control arms, replicated trials, results you can reproduce.

14+ yrs	5+ yrs	4
software engineering experience	as engineering manager, since 2020	agent harnesses benchmarked head-to-head

SUMMARY

Engineering leader with 14+ years building enterprise applications in Go, Java, C#, Python, and JavaScript — managing cross-functional teams and integrating Data Science / Machine Learning solutions along the way. Alongside core engineering-management responsibilities, has spent 2026 building and operating agentic AI systems independently: coding-agent harness engineering, local LLM infrastructure, and autonomous research agents (detailed below).

AI & AGENTIC ENGINEERING — RECENT WORK (2026)

Independent, hands-on work run outside of core job responsibilities. Some underlying repositories are private; the public ones are listed under Public repos.

HARNESS ENGINEERING & EVALUATION

Coding-agent harness engineering & evaluation

- Harden and customize the Pi coding-agent harness for daily use: a pinned TypeScript contract test suite, a current-diff quality gate, project-scoped configuration overlays, stack-aware routing, an external-effect guard, symlink-safe path checks, versioned trace records, and a Docker containment profile.

- Design and run controlled agentic-coding benchmarks (Harbor framework, blinded model-based review, replicated trials) comparing four agent harnesses — Claude Code, Codex CLI, Copilot CLI, and Pi — across Go and Flutter/Dart tasks; also evaluates OpenClaw as a fifth.
- Diagnosed a decoding-configuration regression (disabled reasoning, undocumented greedy decoding) that flipped a replicated coding-benchmark result from 0/4 to 4/4, and built supporting evaluation tooling (stall detection, wall-clock budget nudging) used in later runs.

INFRASTRUCTURE

Local LLM infrastructure

- Operate multi-model local LLM inference serving code-generation, chat, web-search, and speech-to-text concurrently, with validated rollback procedures for every model swap — across two hardware generations: an NVIDIA DGX Spark (GB10) two-host cluster (llama-swap behind a LiteLLM proxy, Tailscale remote access), then a consolidated Apple MLX stack on a Mac Studio M3 Ultra.

MULTI-AGENT SYSTEMS

Personal multi-agent assistant (Hermes)

- Operate a personal AI assistant built on distinct agent profiles — a coding agent, a research agent, and a Kanban-style orchestrator agent — driven by cron-scheduled prompts, including one that runs an ongoing product-idea research pipeline end to end.

CROSS-PLATFORM PRODUCT

DayTrix & Personal Budget Simplifier

- Design, build, and ship DayTrix from one Flutter codebase to web, iOS, and Android, backed by a Go API. Live on the web now at personal-assistant-kkkbm3cwkq-uc.a.run.app (Google Cloud Run); iOS builds ship via Xcode Cloud → TestFlight. CI/CD to Cloud Run, Firebase backend services, and Playwright end-to-end test coverage.
- Also built Personal Budget Simplifier, a second Go + Flutter app (macOS, Windows, Linux, Web, iOS) for CSV-based budget tracking with a pure-Go SQLite backend.

AUTOMATION

Autonomous research agents

- Operate a nightly automated financial-research pipeline (FinRobot-based) covering 60 tickers and indices with automated retry/failure handling.
- Maintain a running daily research log tracking agent-protocol developments — Model Context Protocol (MCP) and Agent2Agent (A2A) — kept continuously since July 2026.

- Built an MCP server (Go + Python) exposing a task-management agent.

PROFESSIONAL EXPERIENCE

Senior Engineering Manager · **Shipt** Dallas, TX (Remote) · Jun 2022–Present

- Manage a high-performing, cross-functional remote engineering team building Tier-0 asynchronous distributed microservices with baked-in instrumentation, monitoring, and alerting
- Collaborate with cross-functional teams to drive efficiency gains in order fulfillment
- Develop and maintain microservices using Go, Python, PostgreSQL, Docker

Software Engineering Manager · **CareXM** Salt Lake City, UT · Dec 2020–Jun 2022

- Managed Full Stack Dev & QA teams delivering Web, Mobile & Desktop applications
- Led modernizing tech stack by replacing MVC architecture with microservices and single page application
- Set up CI/CD pipeline, ensured successful releases with proper observability & monitoring
- Pioneered integration test automation, established on-call support & incident alerting

Assistant Director, Data Science · **Progrexion** Salt Lake City, UT · Nov 2016–Dec 2020

- Progressed over four years from Senior Software Engineer to Data Scientist to Assistant Director, Data Science
- Managed Data Science, ML, and Software Development teams
- Led ML model integration into application workflows
- Developed RESTful services, asynchronous batch processing

Senior Application Development Consultant · **Goldman Sachs**

Salt Lake City, UT · Apr 2015–Nov 2016

Senior Software Engineer · **McDonald's Corporation (IGATE)**

Chicago, IL / Pune, India · Dec 2011–Apr 2015

EDUCATION

Bachelor of Technology, Computer Science and Engineering
Jawaharlal Nehru Technological University (JNTU), India

SKILLS

Go · Java · C# · Python · JavaScript · Relational Databases · Microservices · CI/CD · RESTful Services · Data Science · Machine Learning · Engineering Management · Agile Methodologies

Also working with as of 2026, evidenced by the work described in this resume:

Agentic AI Systems · AI Coding Agents · Model Context Protocol (MCP) · Agent2Agent Protocol (A2A) · LLM Evaluation & Benchmarking · Local LLM Inference (Apple MLX) · Flutter · Firebase · Google Cloud Run · Docker · SQLite · TypeScript

PUBLIC REPOS

buildgate

Unattended agent factory: takes a ticket and a spec, drives a coding agent through a sandboxed build-and-verify loop, and hands a human a reviewable pull request. Merge stays human by design. Go + Temporal, React console, MCP endpoint.

pi-harness

Extensions, skills and prompts that harden the pi coding agent: contract tests, a diff quality gate, an external-effect guard, Docker containment.

todo-kafka-service

Go API whose writes flow through Kafka into Postgres, with Redis for caching and idempotency keys; idempotent consumers and redelivery on failure.

my-mario

A Super Mario–style browser game, live on GitHub Pages at ljammula.github.io/my-mario.
